

Business management, built for how you actually work.

LiteBiz ERP brings your purchasing, inventory, sales, multi-currency cash flow and reporting into one tool — built from the ground up in Kinshasa for Central African trading businesses, not retrofitted from Western software.

WHAT LITEBIZ ERP DOES

Six modules, one single source of truth

Purchasing & suppliers

Purchase orders, receiving, supplier history and landed costs, all in one place.

Multi-location inventory

Real-time stock across warehouses, outlets and branches — no more separate spreadsheets.

Sales & point of sale

Fast counter and wholesale invoicing, with stock updated the instant a sale happens.

Full financials

Cash flow, receivables, payables and reconciliation — without re-keying anything twice.

Native multi-currency

USD and CDF handled natively in every transaction — not a bolt-on module.

Clear reports

Margin, stock turnover and per-location performance, readable by a non-accountant.

WHY LITEBIZ ERP

Built for your market, not adapted for it

01

Built for your market

Designed from day one for a Kinshasa trading business — not a trimmed-down version of European software.

02

Multi-currency from day one

USD/CDF isn't a checkbox — every screen and every report handles both natively.

03

Hands-on onboarding

Guided setup from a team that already understands local operating realities.

"LiteBiz ERP started as an internal tool to run our own trading business in Kinshasa. Today we're opening it up to other businesses facing the same constraints."

— Founding team, LiteBiz ERP
